Patrol intensity u_r in each of 22 districts
deters (bounded)
allocates
raises q_r
Unseeded ABM latent crime L_r
Detection probability $q_r = 0.30 + 0.55\,\min(1, u_r/1.5)$
Recorded crime $D_r \sim \mathrm{Bin}(L_r, q_r)$
observes
reward $\mathrm{cov}(a, D)$
Policy π **(PPO) sets rule** (β, w, μ) **from EWMA of** D
never shown to the policy
Evaluation only: compare with the Greedy oracle, $a_r \propto L_r$
